

Supplementary Fig. S1. Comparison of temperatures the experimental plants were exposed to between 1 April 2017 and 27 May 2017 (days 91-147) in the different experimental situations, and to temperatures they would have been exposed to elsewhere outdoors without treatments during that period.

Black line: All bulbils in the garden. 1 April – 19 April (days 91-109) overwintering in the garden under straw, 19 April – 6 May (days 109-126) in refrigerator.

Red line: Air temperature in Warm May treatment (Cold frame, days 126-147)

Blue line: Air temperature in Cold May treatment (Refrigerator)

Orange line: Air temperature in the garden during the treatments, as comparison.

Green line: Air temperature at a field site with *Rhynchospora alba* during the treatment period, as comparison.
